

# Psych Labs: Experiment on Memory for Presidents -- Data Sheet

Name of Student \_\_\_\_\_ Section \_\_\_\_\_

**Instructions:** When you reach the Results page at the end of the experiment session, copy your own results into the appropriate fields below. For the middle table, presidents you correctly recalled or recognized have a "1" while forgotten presidents have a "0." Note that two sets of Presidents (2 & 6, 40 & 42) have the same first and last name, so the name appeared only once in the recognition condition but was counted twice in the results. **Hit Rate** is the percentage of names of actual presidents correctly remembered (out of 45). **False Alarm Rate** is the percentage of non-presidents incorrectly "remembered" (out of the total number of names "remembered" as presidents).
